

VALENCIA OPTOMETRY

Optomap Digital Eye Imaging

Valencia Optometry is pleased to offer you and your family the most highly advanced technology available in eye disease detection, the Optomap Digital Retinal Imaging.

Dr. Song is concerned about diseases such as macular degeneration, glaucoma, retinal detachments and diabetic retinopathy; all which can lead to partial loss of vision or blindness. Additionally, systemic diseases such as diabetes and high blood pressure can be detected with a retinal examination. Eye exams with retinal evaluations can help you safeguard both your eyesight and general health.

The Optomap Digital Retinal Imaging allows us to thoroughly evaluate your internal eye health with dramatically improved precision that includes a depth in the retina not seen with regular dilation. Dr. Song strongly recommends that all patients have this procedure performed annually. It is especially important for people who have or have a family history of:

- Headaches
- Diabetes
- High Blood Pressure
- High cholesterol
- Family History of Glaucoma, Macular Degeneration, and/or Retinal Detachment
- Family History of Blindness

With an annual Optomap, your doctor can track your eye health for concerns, comparison and treatments. This screening goes beyond what is considered a general health examination and thus there is a \$29 fee.

The Optomap eliminates the need to be dilated, in most cases.

_____ I **ELECT** to have the **Optomap** Digital retinal Image of my retina and decline dilation.

_____ I **DECLINE** the **Optomap** Retinal Imaging and I am **choosing to be dilated**. Dilation can cause blurred vision and light sensitivity for 6 hours or more. Dilation can also cause your eye pressure to suddenly increase and cause glaucoma to develop. The eyedrop medication used for dilation may not be safe for pregnant or nursing women. We recommend that you do not drive while your eyes are dilated. You may return for this dilation on another date or call someone to pick you up. I have read this information about dilation and fully understand that driving may not be safe for me or for others. If I choose to drive after dilation, I do so at my own risk and Valencia Optometry will in no way be held responsible.

_____ I **DECLINE** both **Optomap** and **dilation**. I understand that the potential for partial loss or total loss of vision may exist due to undetected eye disease. I therefore release Valencia Optometry from all liability resulting from failure to diagnose or treat any eye condition due to lack of diagnostic information, which could have been performed by obtaining these tests.
